

MODULES

Build the system that fits your company

MarbleR3 is fully modular: you choose and buy only the modules you need. You can start with one or more and extend the system at any time.

MarbleR3 Business

Warehouse · Production · Sales

Customer orders

Supplier orders

Third-party processing

Consignment stock

Online catalogue

Mobile app

CRM

Racks and project management

Marbler3 Link

Electronic invoicing

Accounting integration

Cost centres and e-invoice import

Customer and supplier position: statements

Company group integration

Every module is enabled by licence and by permissions.

LET'S TALK

Let's see MarbleR3 working on your own material

A guided half-hour demo, with your real cases in front of us. No commitment.

In the cloud or on your own servers?

Whichever you prefer, and the features are the same. Keep it in house and the data stays on your servers, with access from outside opened only if you say so.

Can we start from the data we already have?

Yes: master data, stock and history we import ourselves. The long part is not technical, it is deciding how materials are classified, and we decide it together.

Do we have to stop everything to start?

No. You start with one module, the warehouse, and add the others once that one is running. The old system is not switched off in a single day.

Will it fit the way you work?

Movement types, processing types, numbering and permissions are set, without writing a line of code. What is genuinely only yours we develop to measure.

FEATURES

Everything you need, one click away

Seven of the most used in a stone company below, and three more in the pictures alongside.

Stock and yard map

Blocks, slabs and finished products, consignment stock included. And for every piece the place it sits: yard, zone, row.

Block sheet

The whole life of a block on one page: measurements, slabs obtained, photos, reservations, movements and what it cost.

Web catalogue

A public showcase in four languages, with photos and wishlist: the customer browses from home what you really have in stock.

Movements and processing

Goods in, goods out, transfers and corrections. Sawing and processing, in house or at subcontractors.

Costs

Accumulated along the whole chain: from the purchase price of the block to the cost of the single slab, processing included.

Documents

Sales batches, delivery notes, packing lists, proformas, invoicing, with numbering per group and reconciliation.

Photos and Studio

Photos live on the block and on the slab. Studio prepares them for the catalogue: cut-out, clean background.

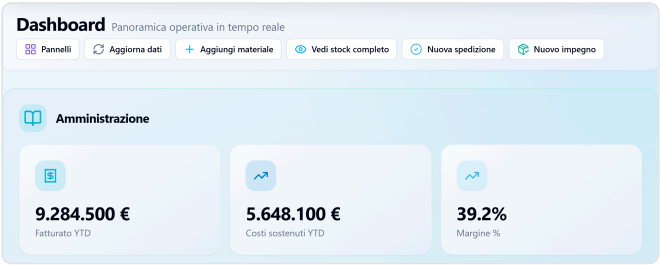

Order book

Customer and supplier orders: how many open, part-delivered, closed.

Dashboard

Revenue, costs and margin for the period, read on real data.

Sales - Trips

Activities, tasks and trips, with the value in play trip by trip.

Real screens of the application. Images for illustration only; names, numbers and amounts are made up.

WEB, MOBILE, TAILORED

Wherever you work, the way you work.

There is nothing to install

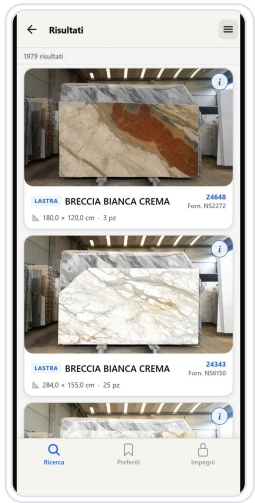

«Web app» does not have to mean depending on somebody else's cloud: the same application can be installed and used on your own servers.

- A new computer is ready in a minute. You open the address and you are in.
- Everyone on the same version. The update happens in one place.
- Windows, Mac, the rep's laptop. All it takes is a browser.

The warehouse in your phone

An app for Android and iOS, same users and same permissions as the web app.

- Search by quality, finish, colour and yard.
- Favourites to pull up in front of the customer.
- It works without a signal too: before going out the app takes data and photographs with it.

Artificial intelligence where it helps

- You ask in words for the chart you want, and the system builds it on your data.
- Printouts change the same way, by asking.
- Every call to the model is logged.

Tailored where it counts

- Printouts and documents on your letterhead, with a dedicated designer.
- Qualities, finishes, groups and price lists stay yours.
- REST APIs for accounting, e-commerce, machinery and third-party portals.
